Instructions for ACL 2019 Proceedings

Anonymous ACL submission

Abstract

This document contains the instructions for preparing a camera-ready manuscript for the proceedings of ACL 2019. The document itself conforms to its own specifications, and is therefore an example of what your manuscript should look like. These instructions should be used for both papers submitted for review and for final versions of accepted papers. Authors are asked to conform to all the directions reported in this document.

This document has been adapted from the instructions for earlier ACL and NAACL proceedings, including those for NAACL 2019 by Stephanie Lukin and Alla Roskovskaya, ACL 2018 by Shay Cohen, Kevin Gimpel, and Wei Lu, NAACL 2018 by Margaret Michell and Stephanie Lukin, 2017/2018 (NA)ACL bibtex suggestions from Jason Eisner, ACL 2017 by Dan Gildea and Min-Yen Kan, NAACL 2017 by Margaret Mitchell, ACL 2012 by Maggie Li and Michael White, those from ACL 2010 by Jing-Shing Chang and Philipp Koehn, those for ACL 2008 by JohannaD. Moore, Simone Teufel, James Allan, and Sadaoki Furui, those for ACL 2005 by Hwee Tou Ng and Kemal Oflazer, those for ACL 2002 by Eugene Charniak and Dekang Lin, and earlier ACL and EACL formats. Those versions were written by several people, including John Chen, Henry S. Thompson and Donald Walker. Additional elements were taken from the formatting instructions of the International Joint Conference on Artificial Intelligence and the Conference on Computer Vision and Pattern Recognition.

2 Introduction

The following instructions are directed to authors of papers submitted to ACL 2019 or accepted for publication in its proceedings. All authors are required to adhere to these specifications. Authors are required to provide a Portable Document Format (PDF) version of their papers. **The proceedings are designed for printing on A4 paper.**

3 General Instructions

Manuscripts must be in two-column format. Exceptions to the two-column format include the title, authors' names and complete addresses, which must be centered at the top of the first page, and any full-width figures or tables (see the guidelines in Subsection 3.6). **Type single-spaced.** Start all pages directly under the top margin. See the guidelines later regarding formatting the first page. The manuscript should be printed single-sided and its length should not exceed the maximum page limit described in Section 5. Pages are numbered for initial submission. However, **do not number the pages in the camera-ready version**.

By uncommenting \aclfinalcopy at the top of this document, it will compile to produce an example of the camera-ready formatting; by leaving it commented out, the document will be anonymized for initial submission. When you first create your submission on softconf, please fill in your submitted paper ID where *** appears in the \def\aclpaperid{***} definition at the top.

The review process is double-blind, so do not include any author information (names, addresses) when submitting a paper for review. However, you should maintain space for names and addresses so that they will fit in the final (accepted) version. The ACL 2019 LATEX style will create a titlebox space of 2.5in for you when \aclfinalcopy is commented out.

3.1 The Ruler

The ACL 2019 style defines a printed ruler which should be presented in the version submitted for

099

050

051

100 review. The ruler is provided in order that re-101 viewers may comment on particular lines in the paper without circumlocution. If you are prepar-102 ing a document without the provided style files, 103 please arrange for an equivalent ruler to appear on 104 the final output pages. The presence or absence 105 of the ruler should not change the appearance of 106 any other content on the page. The camera ready 107 copy should not contain a ruler. (LATEX users may 108 uncomment the \aclfinalcopy command in the 109 document preamble.) 110

138

139

140

Reviewers: note that the ruler measurements do not align well with lines in the paper – this turns out to be very difficult to do well when the paper contains many figures and equations, and, when done, looks ugly. In most cases one would expect that the approximate location will be adequate, although you can also use fractional references (*e.g.*, the first paragraph on this page ends at mark 108.5).

3.2 Electronically-available resources

ACL provides this description in LATEX2e (acl2019.tex) and PDF format (acl2019.pdf), along with the LATEX2e style file used to format it (acl2019.sty) and an ACL bibliography style (acl_natbib.bst) and example bibliography (acl2019.bib). These files are all available at http://acl2019.org/downloads/ acl2019-latex.zip. We strongly recommend the use of these style files, which have been appropriately tailored for the ACL 2019 proceedings.

3.3 Format of Electronic Manuscript

For the production of the electronic manuscript you must use Adobe's Portable Document Format (PDF). PDF files are usually produced from LATEX using the *pdflatex* command. If your version of LATEX produces Postscript files, you can convert these into PDF using *ps2pdf* or *dvipdf*. On Windows, you can also use Adobe Distiller to generate PDF.

141 Please make sure that your PDF file includes 142 all the necessary fonts (especially tree diagrams, 143 symbols, and fonts with Asian characters). When 144 you print or create the PDF file, there is usually 145 an option in your printer setup to include none, 146 all or just non-standard fonts. Please make sure that you select the option of including ALL the 147 fonts. Before sending it, test your PDF by print-148 ing it from a computer different from the one 149

where it was created. Moreover, some word processors may generate very large PDF files, where each page is rendered as an image. Such images may reproduce poorly. In this case, try alternative ways to obtain the PDF. One way on some systems is to install a driver for a postscript printer, send your document to the printer specifying "Output to a file", then convert the file to PDF. 150

192

193

194

195

196

197

It is of utmost importance to specify the A4 format (21 cm x 29.7 cm) when formatting the paper. When working with dvips, for instance, one should specify -t a4. Or using the command \special{papersize=210mm, 297mm} in the latex preamble (directly below the \usepackage commands). Then using dvipdf and/or pdflatex which would make

it easier for some. Print-outs of the PDF file on A4 paper should be identical to the hardcopy version. If you cannot meet the above requirements about the production of your electronic submission, please contact the publication chairs as soon as possible.

3.4 Layout

Format manuscripts two columns to a page, in the manner these instructions are formatted. The exact dimensions for a page on A4 paper are:

- Left and right margins: 2.5 cm
 Top margin: 2.5 cm
 Bottom margin: 2.5 cm
- C
- Column width: 7.7 cm 182
- Column height: 24.7 cm
- Gap between columns: 0.6 cm

Papers should not be submitted on any other paper size. If you cannot meet the above requirements about the production of your electronic submission, please contact the publication chairs above as soon as possible.

3.5 Fonts

For reasons of uniformity, Adobe's **Times Roman** font should be used. In LAT_EX2e this is accomplished by putting

```
\usepackage{times} 198
\usepackage{latexsym} 199
```

200	Type of Text	Font Size	Style
201	paper title	15 pt	bold
202	author names	12 pt	bold
203	author affiliation	12 pt	
204	the word "Abstract"	12 pt	bold
205	section titles	12 pt	bold
206	subsection titles	11 pt	bold
207	document text	11 pt	
208	captions	10 pt	
209	abstract text	10 pt	
210	bibliography	10 pt	
211	footnotes	9 pt	

Table 1: Font guide.

in the preamble. If Times Roman is unavailable, use **Computer Modern Roman** (LATEX2e's default). Note that the latter is about 10% less dense than Adobe's Times Roman font.

249

Center the title, author's name(s) and affiliation(s) across both columns. Do not use footnotes for affiliations. Do not include the paper ID number assigned during the submission process. Use the two-column format only when you begin the abstract.

Title: Place the title centered at the top of the first page, in a 15-point bold font. (For a complete guide to font sizes and styles, see Table 1) Long titles should be typed on two lines without a blank line intervening. Approximately, put the title at 2.5 cm from the top of the page, followed by a blank line, then the author's names(s), and the affiliation on the following line. Do not use only initials for given names (middle initials are allowed). Do not format surnames in all capitals (e.g., use "Mitchell" not "MITCHELL"). Do not format title and section headings in all capitals as well except for proper names (such as "BLEU") that are conventionally in all capitals. The affiliation should contain the author's complete address, and if possible, an electronic mail address. Start the body of the first page 7.5 cm from the top of the page.

The title, author names and addresses should be completely identical to those entered to the electronical paper submission website in order to maintain the consistency of author information among all publications of the conference. If they are different, the publication chairs may resolve

the difference without consulting with you; so it is in your own interest to double-check that the information is consistent.

Abstract: Type the abstract at the beginning of the first column. The width of the abstract text should be smaller than the width of the columns for the text in the body of the paper by about 0.6 cm on each side. Center the word **Abstract** in a 12 point bold font above the body of the abstract. The abstract should be a concise summary of the general thesis and conclusions of the paper. It should be no longer than 200 words. The abstract text should be in 10 point font.

Text: Begin typing the main body of the text immediately after the abstract, observing the two-column format as shown in the present document. Do not include page numbers.

Indent: Indent when starting a new paragraph, about 0.4 cm. Use 11 points for text and subsection headings, 12 points for section headings and 15 points for the title.

3.7 Sections

Headings: Type and label section and subsection headings in the style shown on the present document. Use numbered sections (Arabic numerals) in order to facilitate cross references. Number subsections with the section number and the subsection number separated by a dot, in Arabic numerals. Do not number subsubsections.

Citations: Citations within the text appear in parentheses as (Gusfield, 1997) or, if the author's name appears in the text itself, as Gusfield (1997). Using the provided LATEX style, the former is accomplished using \cite and the latter with \shortcite or \newcite. Collapse multiple citations as in (Gusfield, 1997; Aho and Ullman, 1972); this is accomplished with the provided style using commas within the \cite command, *e.g.*, \cite{Gusfield:97,Aho:72}. Append lowercase letters to the year in cases of ambiguities. Treat double authors as in (Aho and Ull-

300	output	natbib	previous ACL style files	350

346

347

348

349

"Gusfield (1997) showed that ..."

If you are using the provided LATEX and BibTEX style files, you can use the command \citet (cite in text) to get "author (year)" citations.

You can use the command \citealp (alternative cite without parentheses) to get "author year" citations (which is useful for using citations within parentheses, as in Gusfield, 1997).

If the BibT_EX file contains DOI fields, the paper title in the references section will appear as a hyperlink to the DOI, using the hyperref LAT_EX package. To disable the hyperref package, load the style file with the nohyperref option:

\usepackage[nohyperref]{acl2019}

Compilation Issues: Some of you might encounter the following error during compilation:

"\pdfendlink *ended up in different nesting level than* \pdfstartlink."

This happens when pdflatex is used and a citation splits across a page boundary. To fix this, the style file contains a patch consisting of the following two lines: (1) \RequirePackage{etoolbox} (line 454 in acl2019.sty), and (2) A long line below (line 455 in acl2019.sty).

If you still encounter compilation issues even with the patch enabled, disable the patch by commenting the two lines, and then disable the hyperref package (see above), recompile and see the problematic citation. Next rewrite that sentence containing the citation. (See, *e.g.*, http://tug.org/errors.html) **Digital Object Identifiers**: As part of our work to make ACL materials more widely used and cited outside of our discipline, ACL has registered as a CrossRef member, as a registrant of Digital Object Identifiers (DOIs), the standard for registering permanent URNs for referencing scholarly materials. As of 2017, we are requiring all camera-ready references to contain the appropriate DOIs (or as a second resort, the hyperlinked ACL Anthology Identifier) to all cited works. Thus, please ensure that you use BibT_EX records that contain DOI or URLs for any of the ACL materials that you reference. Appropriate records should be found for most materials in the current ACL Anthology at http://aclanthology.info/.

As examples, we cite (Goodman et al., 2016) to show you how papers with a DOI will appear in the bibliography. We cite (Harper, 2014) to show how papers without a DOI but with an ACL Anthology Identifier will appear in the bibliography.

As reviewing will be double-blind, the submitted version of the papers should not include the authors' names and affiliations. Furthermore, selfreferences that reveal the author's identity, *e.g.*,

```
"We previously showed (Gusfield, 1997) ..."
```

should be avoided. Instead, use citations such as

"Gusfield (1997) previously showed ... "

Any preliminary non-archival versions of submitted papers should be listed in the submission form but not in the review version of the paper. ACL 2019 reviewers are generally aware that authors may present preliminary versions of their work in other venues, but will not be provided the list of previous presentations from the submission form.

Please do not use anonymous citations and do not include when submitting your papers. Papers that do not conform to these requirements may be rejected without review.

400 References: Gather the full set of references to-401 gether under the heading **References**; place the section before any Appendices. Arrange the ref-402 erences alphabetically by first author, rather than 403 by order of occurrence in the text. By using a .bib 404 file, as in this template, this will be automatically 405 handled for you. See the \bibliography com-406 mands near the end for more. 407

Provide as complete a citation as possible, using a consistent format, such as the one for *Computational Linguistics* or the one in the *Publication Manual of the American Psychological Association* (American Psychological Association, 1983). Use of full names for authors rather than initials is preferred. A list of abbreviations for common computer science journals can be found in the ACM *Computing Reviews* (for Computing Machinery, 1983).

> The LATEX and BibTEX style files provided roughly fit the American Psychological Association format, allowing regular citations, short citations and multiple citations as described above.

- Example citing an arxiv paper: (Rasooli and Tetreault, 2015).
- Example article in journal citation: (Ando and Zhang, 2005).
- Example article in proceedings, with location: (Borschinger and Johnson, 2011).
- Example article in proceedings, without location: (Andrew and Gao, 2007).

See corresponding .bib file for further details.

Submissions should accurately reference prior and related work, including code and data. If a piece of prior work appeared in multiple venues, the version that appeared in a refereed, archival venue should be referenced. If multiple versions of a piece of prior work exist, the one used by the authors should be referenced. Authors should not rely on automated citation indices to provide accurate references for prior and related work.

Appendices: Appendices, if any, directly follow the text and the references (but see above).Letter them in sequence and provide an informative title: Appendix A. Title of Appendix.

3.8 Footnotes

Footnotes: Put footnotes at the bottom of the page and use 9 point font. They may be numbered or re-

ferred to by asterisks or other symbols.¹ Footnotes should be separated from the text by a line.²

3.9 Graphics

Illustrations: Place figures, tables, and photographs in the paper near where they are first discussed, rather than at the end, if possible. Wide illustrations may run across both columns. Color illustrations are discouraged, unless you have verified that they will be understandable when printed in black ink.

Captions: Provide a caption for every illustration; number each one sequentially in the form: "Figure 1. Caption of the Figure." "Table 1. Caption of the Table." Type the captions of the figures and tables below the body, using 10 point text. Captions should be placed below illustrations. Captions that are one line are centered (see Table 1). Captions longer than one line are leftaligned (see Table 2). Do not overwrite the default caption sizes. The acl2019.sty file is compatible with the caption and subcaption packages; do not add optional arguments.

3.10 Accessibility

In an effort to accommodate people who are colorblind (as well as those printing to paper), grayscale readability for all accepted papers will be encouraged. Color is not forbidden, but authors should ensure that tables and figures do not rely solely on color to convey critical distinctions. A simple criterion: All curves and points in your figures should be clearly distinguishable without color.

4 Translation of non-English Terms

It is also advised to supplement non-English characters and terms with appropriate transliterations and/or translations since not all readers understand all such characters and terms. Inline transliteration or translation can be represented in the order of: original-form transliteration "translation".

5 Length of Submission

The ACL 2019 main conference accepts submissions of long papers and short papers. Long papers may consist of up to eight (8) pages of content plus unlimited pages for references. Upon acceptance, final versions of long papers will be given one additional page – up to nine (9) pages of content plus

¹This is how a footnote should appear.

²Note the line separating the footnotes from the text.

500 unlimited pages for references - so that reviewers' 501 comments can be taken into account. Short papers may consist of up to four (4) pages of content, plus 502 unlimited pages for references. Upon acceptance, 503 short papers will be given five (5) pages in the pro-504 ceedings and unlimited pages for references. For 505 both long and short papers, all illustrations and ta-506 bles that are part of the main text must be accom-507 modated within these page limits, observing the 508 formatting instructions given in the present docu-509 ment. Papers that do not conform to the specified 510 length and formatting requirements are subject to 511 be rejected without review. 512

ACL 2019 does encourage the submission of additional material that is relevant to the reviewers but not an integral part of the paper. There are two such types of material: appendices, which can be read, and non-readable supplementary materials, often data or code. Do not include this additional material in the same document as your main paper. Additional material must be submitted as one or more separate files, and must adhere to the same anonymity guidelines as the main paper. The paper must be self-contained: it is optional for reviewers to look at the supplementary material. Papers should not refer, for further detail, to documents, code or data resources that are not available to the reviewers. Refer to Appendix A and Appendix **B** for further information.

> Workshop chairs may have different rules for allowed length and whether supplemental material is welcome. As always, the respective call for papers is the authoritative source.

A Appendices

Appendices are material that can be read, and include lemmas, formulas, proofs, and tables that are not critical to the reading and understanding of the paper. Appendices should be **uploaded as supplementary material** when submitting the paper for review. Upon acceptance, the appendices come after the references, as shown here. Use \appendix before any appendix section to switch the section numbering over to letters.

B Supplemental Material

Submissions may include non-readable supplementary material used in the work and described in the paper. Any accompanying software and/or data should include licenses and documentation of research review as appropriate. Supplementary material may report preprocessing decisions, model parameters, and other details necessary for the replication of the experiments reported in the paper. Seemingly small preprocessing decisions can sometimes make a large difference in performance, so it is crucial to record such decisions to precisely characterize state-of-the-art methods.

Nonetheless, supplementary material should be supplementary (rather than central) to the paper. Submissions that misuse the supplementary material may be rejected without review. Supplementary material may include explanations or details of proofs or derivations that do not fit into the paper, lists of features or feature templates, sample inputs and outputs for a system, pseudo-code or source code, and data. (Source code and data should be separate uploads, rather than part of the paper).

> The paper should not rely on the supplementary material: while the paper may refer to and cite the supplementary material and the supplementary material will be available to the reviewers, they will not be asked to review the supplementary material.
